

Advanced Connectivity for Industry 4.0

Stephan Litjens
Nokia Innovation Steering

November 2016

NOKIA

Nokia is no longer....

Our vision

Expanding the human possibilities
of the connected world

Physical – Digital Becoming One

Increasingly pervasive use of technology with plenty of disruption potential

Mobile

Smart Applications

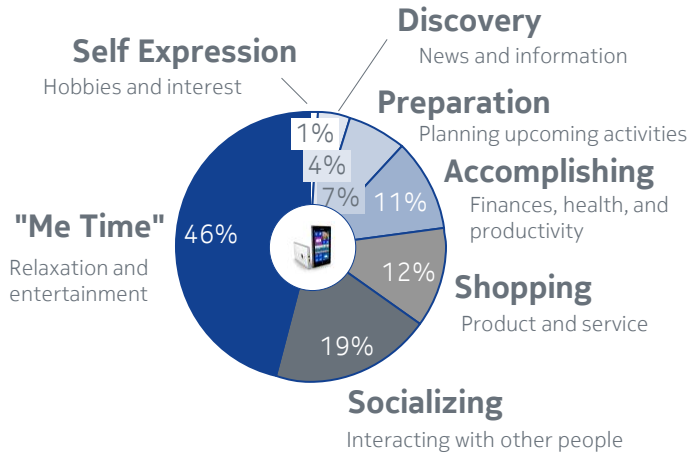

Internet of
People & Things

Wireless Voice 100%

New Sensors & Actuators

New User Interfaces

Artificial Intelligence

Cloud Everywhere

Augmented World

Advanced Connectivity

On-Demand Economy

New Opportunities and Requirements for Advanced Connectivity

New ways how people and things interact

Numbers are according to Nokia Bell Labs and analyst researches

Connected devices by
2020

Up to **46 B**

Cellular IoT global daily
connection requests
by 2020

Up to **135x**

New, diverse and
extreme requirements
to existing networks

Max potential value of
sized applications in
2025

\$11Tn

Forecast M2M CAGR
(2014-2019) revenue

27%

Today most IoT data
goes unused

~90%

Massive IoT
applications

1,000s

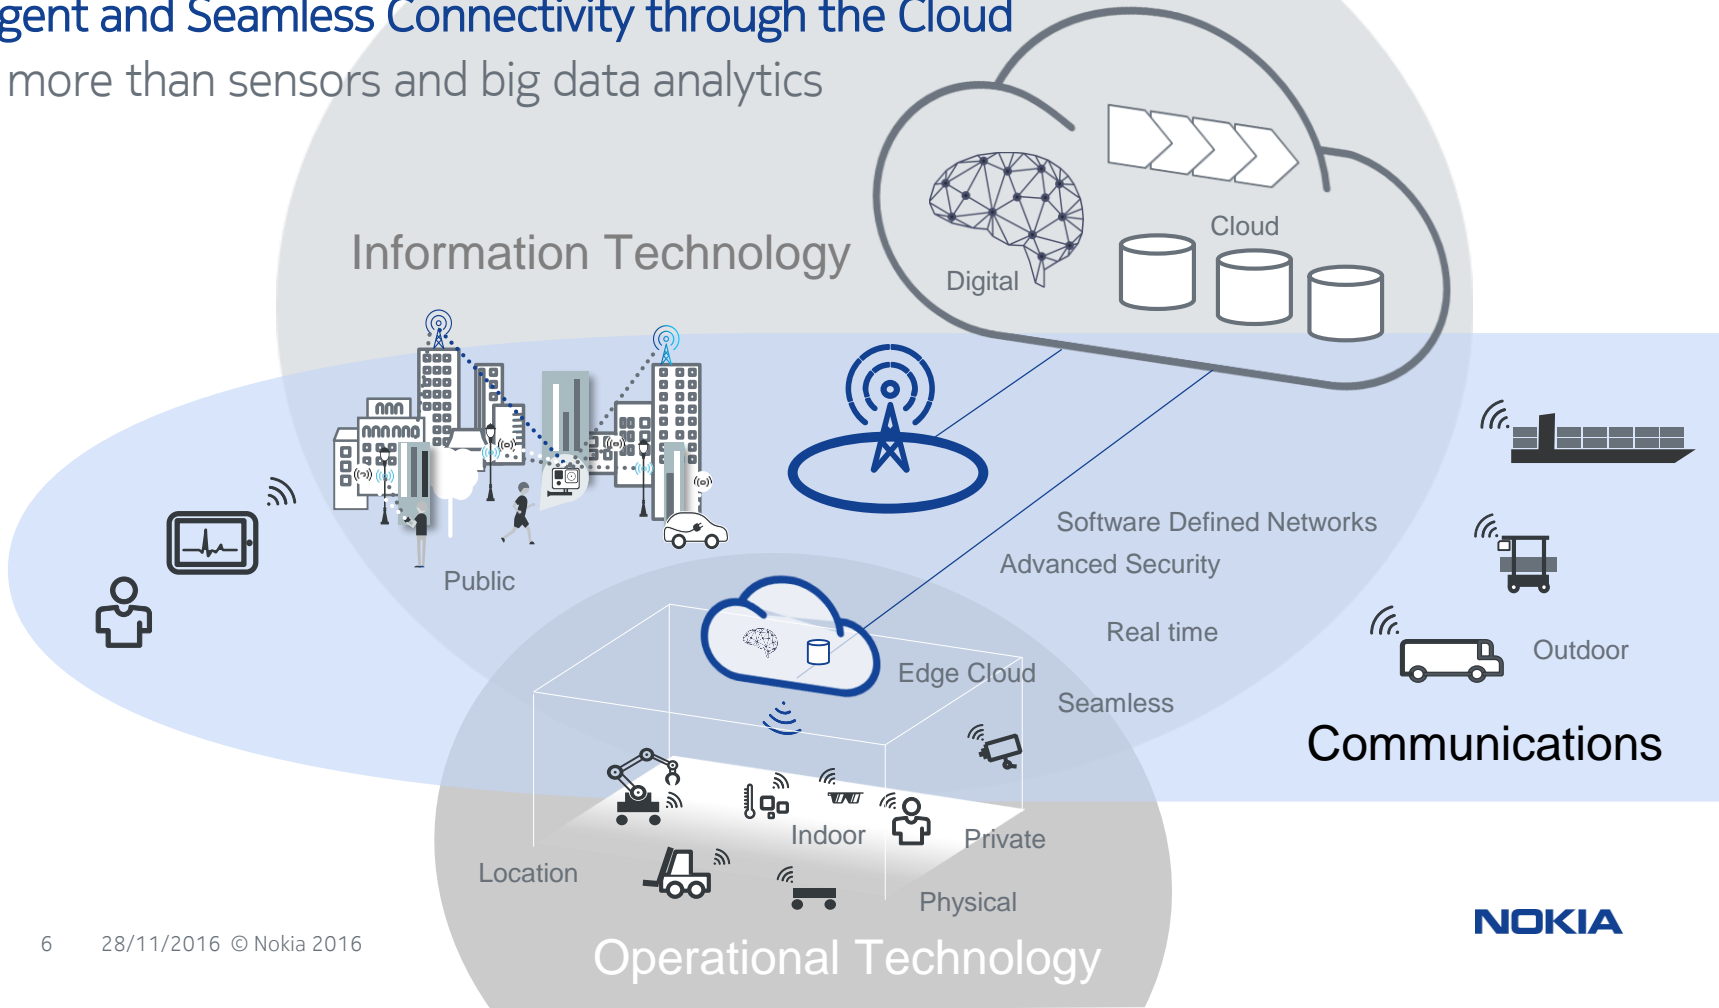

New sensing and
actuation

New

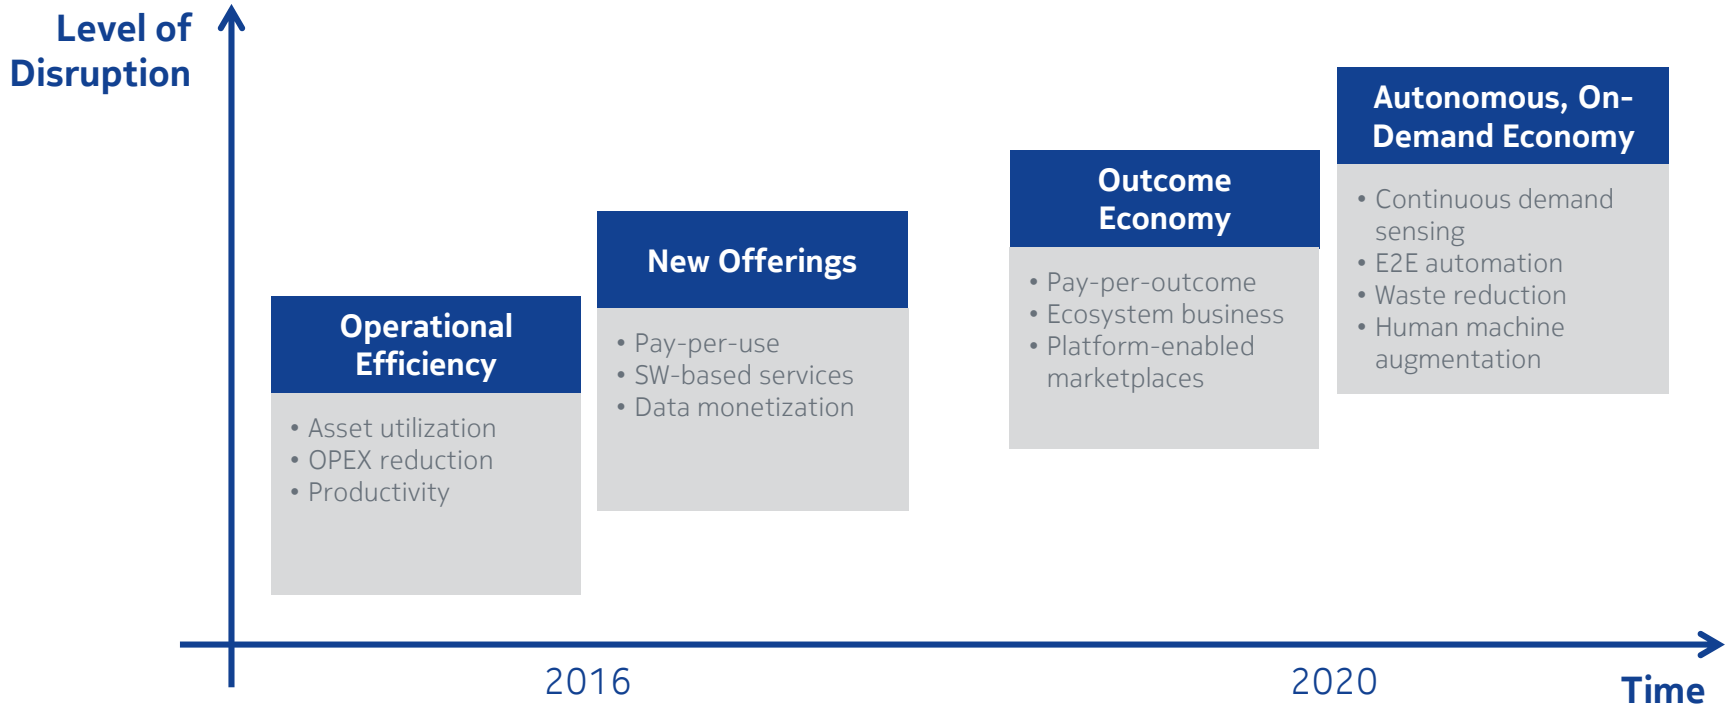

Intelligent and Seamless Connectivity through the Cloud

IoT is more than sensors and big data analytics

New Value Drivers Emerging over Time

Business Model Evolution of the Industrial Internet of Things

NOKIA

In synch

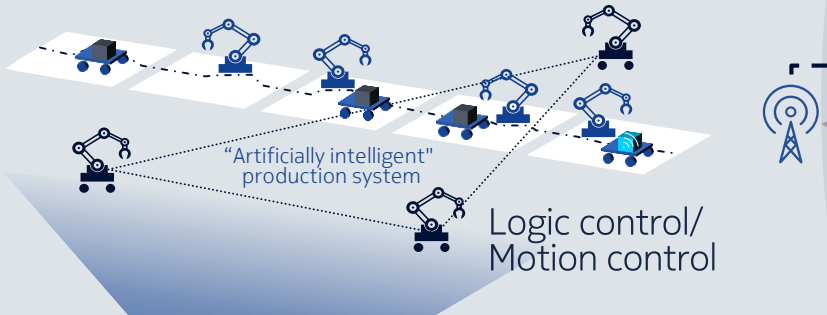

Industrial grade unified ICT infrastructure

Core

Embedded Intelligence

Edge Intelligence

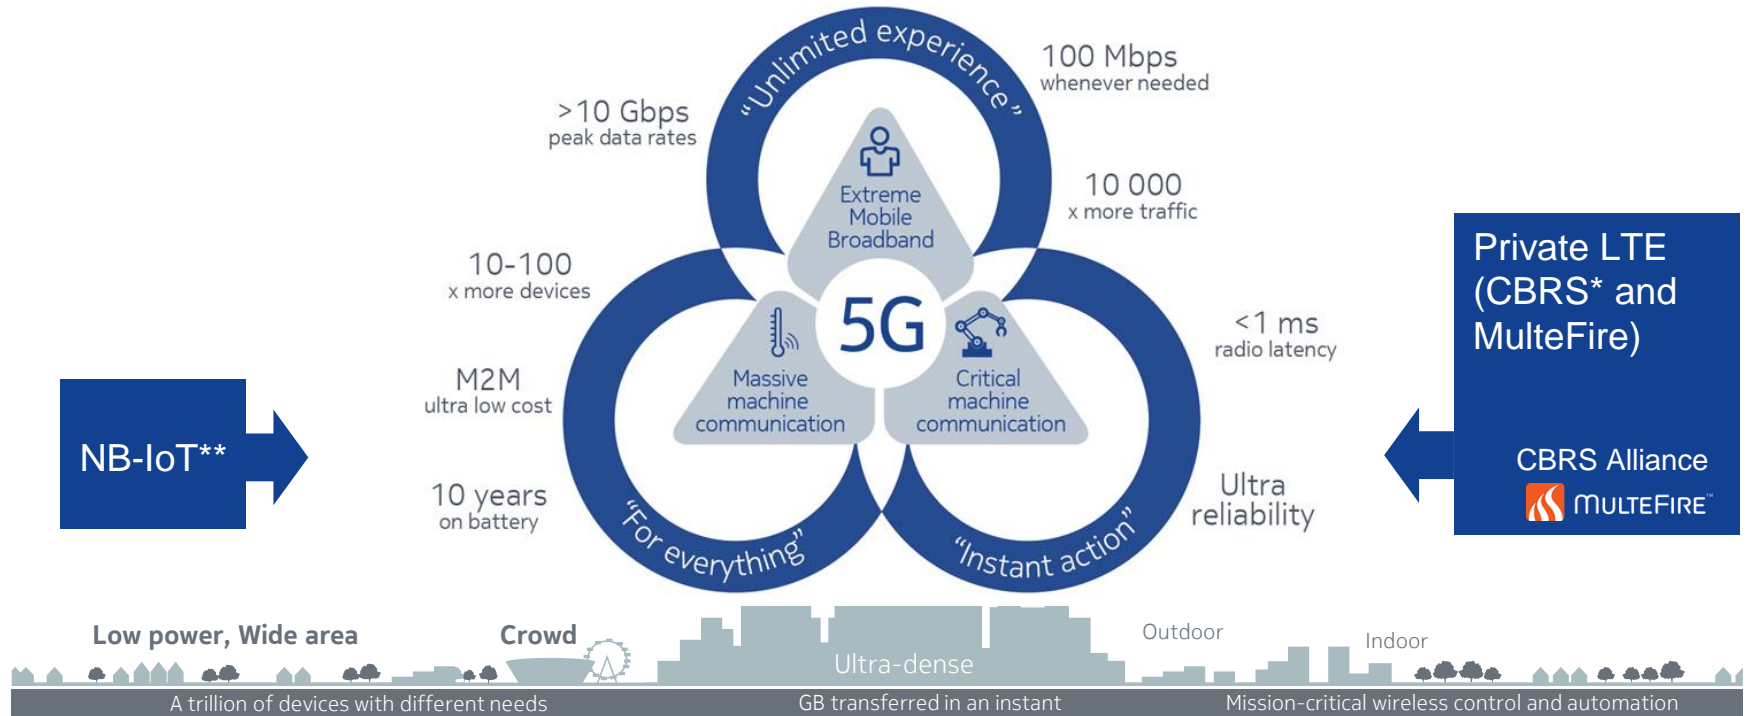

Centralized Intelligence

- Secure
- Deterministic Quality of Service (QoS)
- Seamless (public/private, indoor/outdoor)
- Robust and widely adopted technology
- Software Definable / Programmable

5G Covering Different Requirements – starting with LTE today

Different Deployment Options

* Citizens Broadband Radio Services (USA)

** LTE Narrow Band IoT

Which applications to start with?

Real time

Lowest application latency end-to-end, for a real time user experience or critical communications

Interactive

Maximum transaction rate between device and cloud for an interactive user experience

Private

Local communications for robust performance, privacy, and security

IoT

Real time insights from data exploited at the point of capture, minimum cloud ingress bandwidth

Data and compute heavy

Local compute and storage for most demanding workloads to go mobile

In November 2015 Car2X was publicly showcased on A9 highway, based on Zone Computing installed in Deutsche Telekom's live LTE network

Cooperative overtaking assistant (left)
Electronic brake light (right)
Robust 10...15ms application latency end-to-end

Demanding use cases

Deutsche Telekom LTE
Nokia Zone Computing
Fraunhofer onboard units
Continental in-car applications
Highest level political support

Teamwork

Strong partners

Private LTE Trial in a Nokia Factory

Real-time
Reliable wireless

Live AGV tracking

Private LTE trial in a factory setup
Improved wireless coverage
Existing and proven technology
Enterprise Core

Network in a Box (NIB)

Push-to-Talk
Real-time video broadcasting
Flexibility

**Wireless-connected
workers and assets**

Building It Together With You
