MacControl Trojan Being Used in Targeted Attacks Against OS X Users

Network security vendor RSA has announced that they have been the victim of "an extremely sophisticated cyber attack in progress being mounted against RSA". Specific details of the breach have been limited thus far, but RSA has confirmed that data taken from their network directly pertains to their SecurID two factor authentication products.

The SecurID system is employed by corporations and businesses all over the world as a means of securing access to sensitive business systems both on-site and from remote locations. The keys generated by the system require a user to connect using their username, a personalized PIN number, and a security token generated by SecureID devices. Each token is generated by the user when they begin a connection, and usually remains valid for about 30 seconds. This method has been a cornerstone of system access security for quite some time,
